EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1903 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent NPL

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 11/07/2015 has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 11/07/2015 has revealed that there are 5 ENVIROSTOR sites within approximately 1 mile of the target property.

Project Revenue Source Desc: It appears at this time that it will continue to be necessary to utilize Bond funds to remediate this site. The Department will undertake appropriate cost recovery action. This site has not been identified as a National Priorities List (NPL) site, nor does it appear to be a likely NPL candidate in the future. Therefore, it appears unlikely that federal funds are a viable source of revenue for this site.

Site Description: The site was formerly a permitted industrial waste recycling and disposal facility that closed in 1982. Various industrial solvents and waste oil were brought to the facility by local businesses in the area.

Hazardous Waste Desc: Soils are contaminated by heavy metals, polychlorinated biphenyls (PCBs), volatile organics (VOCs) and base/neutral organic compounds. VOCs were detected in samples collected from an onsite ground water monitoring wells.

Threat To Public Health & Env: There is a threat of ground water contamination. Although the use of the upper aquifer in the immediate area is limited to irrigation, there is a potential for migration of site contaminants. There is also a threat of human exposure by direct contact to contaminated soils onsite and to runoff during rainfall.

Site Activity Status: DHS issued a remedial action order to potentially responsible parties (PRPs) in January, 1986. The PRPs failed to respond and were found in noncompliance with the order in April, 1986. The Department is preparing an engineering and cost analysis for an expedited response involving soil removal, removal of buried drums and surface water removal which is planned for the early Spring/Summer of 1989 depending upon weather conditions. In addition, ground water remedial investigation activities are also ongoing.

in the area. These operations continued until 1981 when the Chathams sold the property, which eventually reverted back to the Chathams when the buyer filed for bankruptcy. In 1982, the California Department of Health Services (DHS), the predecessor agency of the California Department of Toxic Substances Control (DTSC), and other governmental agencies became aware of the existence of hazardous chemicals at the Yard and began various phases of site investigation and remedial activities. The Yard was fenced in 1984. In June 1985, Chatham Brothers Barrel Yard Site (Site) was listed in the Bond Expenditure Plan making it a "State Superfund Site." On January 23, 1986, DHS issued an administrative Remedial Action Order to the Chathams requiring them to complete the Remedial Investigation and Feasibility Study and identify the final cleanup options in a remedial action plan. The Chathams did not comply with the Order, claiming lack of funds. DTSC made a Determination of Non-Compliance and commenced a State funded remediation program. In 1986, a Site Remedial Investigation was performed to determine the nature and extent of soil contamination, and whether the groundwater contamination beneath the Yard existed. The soils inside the Yard were found to be contaminated with polychlorinated biphenyls (PCBs), volatile organic compounds (VOCs), semi-volatile organic compounds and metals. Ground-water contamination was found beneath the Yard. Forty cubic yards of contaminated soil was removed from different areas along Bernardo Avenue on April 21 and 22, 1987. Further soils and hydrogeologic investigations were conducted in 1988 and 1989 to define concentrations and quantities of soil contamination, and to determine whether groundwater contamination has migrated outside of the Yard. Groundwater contamination was found to have migrated outside of the Yard and soil contamination was determined to be a source of groundwater contamination. Commencing in March 1990, DHS conducted a Removal Action (RA) at the Yard to reduce the potential for further degradation of groundwater. The work included excavation, removal, and offsite disposal of 11,430 tons of highly contaminated soils; removal of 208 surface drums and 10 buried drums; and rehabilitation of a 5-foot diameter, 68-foot deep hand dug well located inside the Yard into a 12-inch diameter well. The RA, performed under an imminent or Substantial Endangerment Order issued in November 1989, was completed in June of 1990, and cost approximately \$3 million. The soils at the Yard are now considered stabilized. Surface water contamination migration was decreased by the RA activities. Seven groundwater monitoring wells and three 100-foot monitoring wells were installed in September of 1990 and May 1991 to determine the extent of vertical and horizontal contamination. Groundwater contamination has been identified both inside and outside the Yard. In 1991, DTSC determined that significant VOCs contamination existed up to depths of 50 feet and 100 feet in the groundwater beneath the Yard. In December 1990, DTSC began sending Information Request Letters to approximately 180 Generator Potentially Responsible Parties (PRPs) who may have sent waste materials to the Yard. DTSC evaluated the responses of the 180 PRPs, and identified 96 to whom Special Notice Letters were sent. In January 1992, DTSC notified the 96 PRPs that they should form a steering committee to begin "good faith" negotiations to remediate the Site and to reimburse DTSC for past costs. As a result of these negotiations, an administrative Imminent and Substantial Endangerment Order & Consent Order was signed.

the predecessor agency of the California Department of Toxic Substances Control (DTSC), and other governmental agencies became aware of the existence of hazardous chemicals at the Yard and began various phases of site investigation and remedial activities. The Yard was fenced in 1984. In June 1985, Chatham Brothers Barrel Yard Site (Site) was listed in the Bond Expenditure Plan making it a "State Superfund Site." Not reported

On January 23, 1986, DHS issued an administrative Remedial Action Order to the Chathams requiring them to complete the Remedial Investigation and Feasibility Study and identify the final cleanup options in a remedial action plan. The Chathams did not comply with the Order, claiming lack of funds. DTSC made a Determination of Non-Compliance and commenced a State funded remediation program.

Not reported

In 1986, a Site Remedial Investigation was performed to determine the nature and extent of soil contamination, and whether the groundwater contamination beneath the Yard existed. The soils inside the Yard were found to be contaminated with polychlorinated biphenyls (PCBs), volatile organic compounds (VOCs), semi-volatile organic compounds and metals. Groundwater contamination was found beneath the Yard. Forty cubic yards of contaminated soil was removed from different areas along Bernardo Avenue on April 21 and 22, 1987. Further soils and hydrogeologic investigations were conducted in 1988 and 1989 to define concentrations and quantities of soil contamination, and to determine whether groundwater contamination has migrated outside of the Yard. Groundwater contamination was found to have migrated outside of the Yard and soil contamination was determined to be a source of groundwater contamination.

Not reported

Commencing in March 1990, DHS conducted a Removal Action (RA) at the Yard to reduce the potential for further degradation of groundwater. The work included excavation, removal, and offsite disposal of 11,430 tons of highly contaminated soils; removal of 208 surface drums and 10 buried drums; and rehabilitation of a 5-foot diameter, 68-foot deep hand dug well located inside the Yard into a 12-inch diameter well. The RA, performed under an imminent or Substantial Endangerment Order issued in November 1989, was completed in June of 1990, and cost approximately \$3 million. The soils at the Yard are now considered stabilized. Surface water contamination migration was decreased by the RA activities.

Not reported

Seven groundwater monitoring wells and three 100-foot monitoring wells were installed in September of 1990 and May 1991 to determine the extent of vertical and horizontal contamination. Groundwater contamination has been identified both inside and outside the Yard. In 1991, DTSC determined that significant VOCs contamination existed up to depths of 50 feet and 100 feet in the groundwater beneath the Yard.

Not reported

In December 1990, DTSC began sending Information Request Letters to approximately 180 Generator Potentially Responsible Parties (PRPs) who may have sent waste materials to the Yard.

DTSC evaluated the responses of the 180 PRPs, and identified 96 to whom Special Notice Letters were sent. In January 1992, DTSC notified the 96 PRPs that they should form a steering committee to begin "good faith" negotiations to remediate the Site and to reimburse DTSC for past costs.

Not reported

As a result of these negotiations, an administrative Imminent and Substantial Endangerment Order & Consent Order was signed on November 16, 1992 between DTSC and approximately 55 PRPs. Two "Cash Buy-Out" Consent Decrees were signed between DTSC and 16 additional PRPs and lodged in a federal court on October 12, 1993.

Not reported

The Consent Order called for, among other things, immediate construction and operation of a pump and treat system to remove the highly contaminated groundwater beneath the Yard; completion of the Remedial Investigation and Feasibility Study; preparation of a Remedial Action Plan; and payment of \$4 million to DTSC for past costs. Settling PRPs and DTSC negotiated another agreement for the implementation of the RAP.

Not reported

Signatories to the two "Cash Buy-Out" Consent Decrees, who are de minimis PRPs, paid DTSC approximately \$328,000 and \$128,000 respectively, for DTSC's past costs in accordance with their volumetric share of waste sent to the Yard. Also, these PRPs established an approximately \$1.7 million escrow account for their share of future Site remediation costs.

Not reported

Since the signing of and pursuant to the November 16, 1992 Consent Order, the following major activities were completed:

Not reported

- 1) \$4,000,000 paid for DTSC's past costs;
- 2) The interim Groundwater Removal Facility was tested in December 1993 and became fully operational in February 1994;
- 3) Field activities for the RI were completed on February 7, 1995, site investigation of Robert Chatham's property located at 1261 Gamble Lane, Escondido, occurred during the period of April 3-13, 1995;
- 4) The RI Report was approved in March 1996. Results of groundwater sampling indicate that substances of concern have migrated to downgradient areas outside of the Yard and the contaminated groundwater plume extends approximately 5,000 feet southeast of the Yard, in the area of Felicita Park.
- 5) The Human Health Risk Assessment and Screening Ecological Evaluation Report was approved on August 7, 1996.
- 6) The Feasibility Study (FS) was approved on Dec. 20, 1996. Commencing in the early 1940s, Chatham Brothers Barrel Yard (Yard) was operated as a waste oil and solvent recycling and bulk petroleum facility. In later years, the facility handled
- 7) The Remedial Action Plan (RAP) was approved on January 20, 1998.

Not reported

A very low concentration of trichloroethylene (below MCLs) was detected in the farthest water table monitoring well located at Felicita Park.

Lake Hodges, a drinking water source, is more than a mile away from the known leading edge of the groundwater plume. Moreover, no reported private and public production well & are being used for drinking.

Not reported

Based on the sampling results, the Human Health Risk Assessment and Screening Ecological Evaluation (HHRASEE) was conducted. The goal of the HHRASEE was to determine the potential impacts that contaminants from the Yard could have on human health and the environment. Health effects were evaluated for cancer-causing and non-cancer causing effects.

Not reported

Results of the human health risk assessment indicated that the potential increase of risk for residents living outside the Yard is negligible, even when assuming that ingestion of soil and groundwater would occur. The screening ecological evaluation indicated that a wide variety of plants and animals live within a one-mile radius of the Yard. While some special and sensitive species may occasionally live on the Yard, this evaluation concluded that no wildlife was found to be affected by contamination from the Yard.

Not reported

The FS evaluated remedial alternatives for the Site. Cleanup alternatives were evaluated using the nine criteria of the US Environmental Protection Agency. The soil alternatives selected for evaluation included no action, excavation, treatment, covering the soil with a cap, disposal of excavated soil outside the Yard, fencing, and monitoring and maintaining the cap. The groundwater alternatives selected for evaluation included no action, pumping and treating areas with high concentrations of contaminants, air sparging, monitoring groundwater to demonstrate whether areas of low concentrations of contaminants would be cleaned up by natural attenuation, remedy evaluation, proper disposal of treated water and deed restrictions.

Not reported

The approved RAP included the following remedies, for the soil: 1) soil cap, 2) soil vapor excavation; 3) excavation and offsite disposal of contaminated sediments outside of the Yard and 4) deed restrictions. The selected groundwater remedy includes: 1) extraction of groundwater inside and outside of the Yard, 2) groundwater treatment using air stripping or UV/Chemical oxidation, 3) natural attenuation of low concentrations down a gradient plume 4) institution controls such as a deed restriction, wellhead treatment, and public notifications, 5) development of a Monitoring and Contingency Plan to address any "unstable" contaminated groundwater/surface water, 6) a remedy evaluation after three years, and 7) operation and maintenance of the implemented remedies.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

USGS TOPOGRAPHIC MAP

Target Property Map:	5641298 ESCONDIDO, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: PLACENTIA

Soil Surface Texture: sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
